

UPM ProFi[®] Facade

UPM ProFi Facade is a new environmentally innovative product for exterior cladding. Stylish, durable and requiring only low maintenance, UPM ProFi Facade provides a fresh and modern look with long lasting colours.

Low maintenance & long life-cycle

Durable colours: The composite material is lignin free and resists the normal wood greying effect.

Virtually maintenance free: Requires no sanding, varnishing or painting etc.

Weather proof: The extremely low moisture absorption of the material helps minimise maintenance and expands the life-cycle.

Hard wearing: The innovative composite material has a high impact resistance and is coloured throughout, enabling it to survive the typical knocks and scrapes from normal use.

Fire resistance: Class E (properties similar to untreated timber)

*) Night Sky Black

Stone Grey

Silver Green

Sunny Beige

Snow Blue

Autumn Brown

FRESH AND MODERN LOOK

Stone-like surface appearance.

Six colour options and a modern profile.

Natural colours: The material will look good either on its own or as a design feature in combination with other building materials: brick, concrete render, aluminium etc.

QUICK AND EASY TO INSTALL

Connectors and caps available in all panel colours.

A complete cladding solution that is flexible enough to cope with different building designs.

Complete solution includes:

- panels (standard length 3 m)
- connectors
- outer & inner corner caps
- starter rail.

For ventilated and non-ventilated walls.

Horizontal fixing on "normal" cladding sub-construction.

Pre-drilled long holes (for easy fixing with screws to the sub-construction).

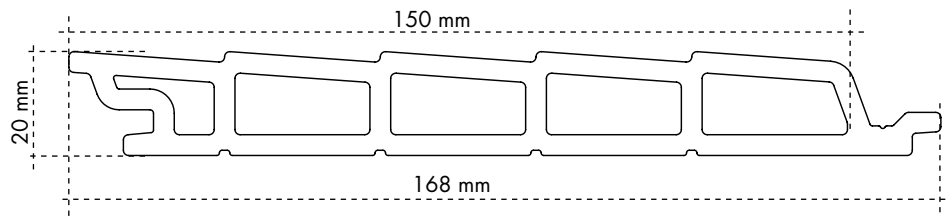

The material can be easily cut with normal woodworking tools. No special tools are needed.

HELPING THE ENVIRONMENT

UPM ProFi Facade is made from an award winning composite material whose principle raw materials are clean plastic polymers and cellulose fibres which fall as bi-products in the manufacture of labels. As there is no other significant recycling process for the label surplus material, the manufacture of UPM ProFi Facade actually reduces landfill and waste incineration.

UPM ProFi products have a long life-cycle and at the end of their lives they can be disposed of with normal household waste for incineration into energy. In principle they can also be converted to new UPM ProFi products.

UPM ProFi Facade cladding is PVC free. All raw materials are non-toxic and harmless to the nature.

Owing to the nature of the recycled raw material, slight variations in colour shade may exist between different production batches.

* Please note that dark colours in all materials absorb (and emit) more heat than light colours. It is therefore not recommended to use Night Sky Black in south facing installations or in any building in a Mediterranean or hotter climate.
